

# myID and Health Business Services (HBS)

About 

## Digital Identity

- myID is the Australian Government's digital identity app. You can use Australian-issued documents to set up your myID.

## Quick and easy to use

- Set up once and use your myID to quickly access online government services.

## Keep your data secure

- Using myID helps us keep your personal and commercial data more secure, reducing cyber security and fraud risks.

## ● Benefits of using myID

- myID is a secure way to prove who you are online.
- You only need to provide personal documents once during setup.
- Once you've [set up your myID](#), you can use it to access government online services without verifying your ID each time.
- You don't need to remember passwords for each service you access.

## ● How we use your myID

- When you use myID to sign in to the Health Business Services (HBS) portal, we only access your name, myID email address and [identity strength](#).
- Your myID email address is likely to be a personal email address. We don't use this email address in HBS for anything other than allowing you to sign in with your myID.
- When you access HBS for the first time, we ask for a **Contact email** address. This can be a work email address. You can change your Contact email address at any time.
- You will need a **Standard strength** myID to access HBS.

## ● myID is not myGov

- myID is an authentication tool only and is available through the [Apple App Store](#) or [Google Play](#).
- myGov allows access to government services online and is run by Services Australia. Health Business Services (HBS) does not integrate or share data with myGov.
- When you sign into HBS with your myID, we do not have access to your myGov data.

## ● Privacy and security

- Using myID helps us keep your personal and commercial data more secure, reducing cyber security and fraud risks.
- The myID app uses encryption as well as the security features in your device, such as fingerprint, face recognition or a password. This is to protect your identity and help stop others accessing your information.
- You can read about how your personal data is kept safe at [Protecting your Digital ID](#).
